

Rising 4th Grade Summer Suggestions

Math

This summer we are offering two options for students to reinforce their math proficiency over the summer months. Practicing **1 to 1.5 hours a week** consistently every week of the summer (**10 to 15 hours total**) will help ensure a smooth transition back to school in August. If your child wants to do more, all the better.

- **Math Minutes for Rising 4th** (ISBN 978-1-59598-825-0): These workbooks are available for purchase online or through local bookstores. Students should complete the workbook *for the grade they just completed*. Sample Link [Here](#)
- **Khan Academy** (<https://www.khanacademy.org/math/cc-fourth-grade-math>). Complete the entire course or target specific areas for practice. The third grade course can also be completed for a review.

Reading

This summer we recommend that students read one fiction AND one nonfiction grade appropriate book chapter book. These books can be of students' choice and can be added to the list that Mrs. Lutter has suggested for the summer as well. See [the link here](#) for other local Library Summer Reading programs.

Writing

Use [these writing prompts](#) to keep a summer journal. Make a scrapbook of journal entries about your summer adventures.

Keyboarding Practice

For students entering grades 4- 8, computer keyboarding is an essential skill that will benefit them greatly as we increase the use of technology. [Typing.com](#) offers fun, helpful, and free keyboarding practice. Students should create an account to keep track of their progress (not for teachers to monitor).

Faith

Listen to the [Catholic Sprouts Podcast](#) to grow in your faith. Spend time each day reading Scripture. The Hallow App and [Formed](#) is also a great resource for praying with your family and learning more about the faith.
